A Report on Internship Project

Research Paper Management and Summarization Platform

Internship Program: AI GPU Summer Internship Program 2026

Organization: AI Centre of Excellence (Accelerated by NVIDIA)

Institution: Presidency University, Bengaluru

Date of Submission: 12/06/2026

Submitted By

Name : Rakshita Patil

Abstract

understand the main objectives, methodology, and findings of a study. It also extracts important metadata such as title, authors, abstract, and keywords to improve document organization and retrieval Research Paper Management and Summarization Platform is a web-based application designed to simplify the process of organizing, managing, and understanding academic research papers. Researchers and students often face difficulties in handling large collections of research documents and spending significant time reading lengthy papers to extract relevant information. This platform addresses these challenges by providing a centralized system for uploading, storing, searching, and managing research papers efficiently.

The platform incorporates Natural Language Processing (NLP) techniques to automatically generate concise summaries of uploaded research papers, enabling users to quickly. Additional features such as keyword-based search, bookmarking, and personalized paper collections enhance the overall user experience and research productivity.

Developed using HTML, CSS, JavaScript, PHP, MySQL, and XAMPP, the system provides a user-friendly interface and efficient backend management. The proposed platform reduces the time and effort required for literature review, improves accessibility to academic resources, and supports researchers in making informed decisions by providing quick insights into research content. The system serves as an effective tool for modern research management and academic knowledge discovery.

Problem Statement

Many students and researchers have to read a large number of research papers for their studies and projects. Managing these papers and finding important information takes a lot of time and effort. Reading long research papers completely is often difficult and time-consuming. There is a need for a system that can store research papers in one place, organize them properly, and provide short summaries so that users can quickly understand the main ideas of the paper. This will help save time and make research work easier and more efficient.

Primary Objectives

To store and manage research papers in one platform.

To organize research papers efficiently.

To generate automatic summaries of research papers.

To reduce the time required to understand research content.

To enable quick search and easy access to research papers.

To improve research productivity and efficiency.

Methodology

The Research Paper Management and Summarization Platform follows a systematic approach to manage and summarize research papers efficiently.

1. User Registration and Login
    - Users create an account and log in to access the platform securely.
2. Research Paper Upload
    - Users upload research papers in PDF format to the system.
3. Data Extraction
    - The system extracts important information such as title, authors, abstract, and keywords from the uploaded paper.
4. Paper Storage
    - The uploaded papers and extracted details are stored in the MySQL database for future access.
5. Automatic Summarization
    - The summarization module analyzes the research paper and generates a concise summary highlighting the key points.
6. Search and Retrieval
    - Users can search papers using keywords, titles, or author names and quickly retrieve relevant documents.
7. Result Display

- The system displays the research paper details and generated summary through a user-friendly interface.

Results & Discussion

The developed Research Paper Management and Summarization Platform successfully manages and organizes research papers in a centralized system. Users can upload research papers, store them securely, and retrieve them easily through the search functionality. The platform effectively extracts important information such as the title, authors, abstract, and keywords from uploaded documents.

The summarization module generates concise summaries that help users understand the main concepts of a research paper without reading the entire document. This significantly reduces the time required for literature review and improves research efficiency. The search and retrieval features enable quick access to relevant papers, making the research process more organized and productive.

Overall, the system demonstrates that integrating research paper management with automatic summarization can simplify academic research activities, improve document accessibility, and enhance user productivity.

Conclusion

The Research Paper Management and Summarization Platform is designed to simplify the process of handling and understanding research papers. The system provides a centralized environment where users can upload, organize, search, and manage research documents efficiently. By automatically generating summaries, the platform helps users quickly identify the key ideas, methodology, and findings of a research paper without spending excessive time reading the entire document.

The platform improves the efficiency of literature reviews, reduces manual effort, and enables faster access to relevant academic information. It also enhances research productivity by allowing users to manage large collections of research papers in an organized manner. Overall, the project demonstrates how technology and automation can support researchers, students, and academicians in conducting research more effectively and efficiently. Future enhancements such as AI-based recommendations, citation management, and advanced analytics can further improve the capabilities of the system.
