AI Resume Analyzer & Job Recommendation System

Generated on 2026-08-15 06:12:17 | Resume: siri (7) (6).pdf

Responsible AI Notice: *This system is designed solely for educational career guidance and self-assessment. It must not be used as an automatic hiring, selection, or recruitment decision system. Match scores are similarity estimates based on resumes compared to career profiles and do not represent actual recruiter decisions or hiring probabilities. The assessment is strictly based on job-related skills and qualifications; it completely excludes protected characteristics (e.g., gender, age, nationality, address).*

1. Extracted Skill Profile Summary

No technical skills were identified in the resume. Try uploading a text-based format or adding specific skills sections.

2. Top Job Role Recommendations

The system compared the extracted skills and TF-IDF profile of the resume against pre-defined roles. Below are the top recommended roles:

Rank	Role Name	Match Score	Match Category
1	**Python Developer**	2.9%	Low Match
2	**Business Intelligence Analyst**	2.9%	Low Match
3	**Full Stack Developer**	2.1%	Low Match
4	**NLP Engineer**	1.8%	Low Match
5	**Data Analyst**	1.4%	Low Match

3. Target Role Match Analysis: Data Analyst

Description: Analyzes data to find trends and build visual reports

Score Component	Calculated Value	Component Weight
Skill Coverage Score	0.0%	70%
TF-IDF Text Similarity	4.6%	30%
Combined Match Score	**1.4% (Low Match)**	100%

Required Skills Breakdown:

	None detected
Missing Skills	SQL, Excel, Pandas, NumPy, Power BI

Note: A missing keyword does not necessarily mean you lack the actual ability; it indicates that the keyword was not detected in the parsed text.

4. Recommended Learning Roadmap

This personalized 4-week study plan focuses on bridging the skill gaps identified for your target role:

Week 1: Foundations & Setup
Topic: SQL Joins and Aggregations

- **SQL:** Learn SQL syntax, write queries, create database tables, use joins, and practice index optimization.
- **Power BI:** Build interactive dashboards in Power BI, data prep via Power Query, and write DAX scripts.

Week 2: Core Implementation
Topic: Pandas Dataframes

- **Excel:** Learn Excel pivot tables, formulas (INDEX/MATCH, XLOOKUP), and advanced data dashboards.
- **Python:** Learn Python fundamentals, syntax, Object-Oriented Programming (OOP), and built-in data structures (lists, dicts, sets).

Week 3: Practical Integration
Topic: Excel Pivot Tables

- **Pandas:** Master Pandas DataFrames, Series operations, data cleaning, filtering, merging, and reshaping datasets.
- **Tableau:** Learn Tableau visual analytics, dashboard publishing, worksheets, and workbook connections.

Week 4: Best Practices & Validation
Topic: Power BI Visualization

- **NumPy:** Understand NumPy multi-dimensional arrays, vectorization, mathematics, and linear algebra.
- **Git:** Learn version control principles, branches, merges, resolving conflicts, and commits.
